

MINIATURE OUTPUT PENTODE 0.3A INDIRECTLY HEATED

N37
APRIL, 1952

BASE CONNECTIONS AND VALVE DIMENSIONS

View from underside
of base.

Base : B7G
Bulb : Tubular

Overall length : 64—70 mm.
Seated length : 58—64 mm.
Max. diameter 19 mm.

The conditions given in the last two columns are those obtained when the valve is over-biased. They are useful when H.T. power is limited and reduced power output can be tolerated.

Two Valves. Push-pull, Class AB₁, Pentode Connection

GRID RESISTOR

The maximum permissible D.C. resistance from control grid to cathode is limited to 0.27 MΩ ± 20% for auto-bias and 0.1 MΩ for fixed bias applications.

SCREENING

No internal or external screening is fitted to the valve.

MOUNTING

Any position.

RETAINING

The use of a retaining device is recommended.

VENTILATION

Free air circulation around the bulb is preferable. If a retaining device in the form of a canister is employed, the surfaces should be blackened. The temperature of the hottest part of the bulb must not exceed 250°C.

MICROPHONY

Although this is of a very low order, equipment should be designed to minimise microphony.
